

Hardware Information

When you plug in your PawsTime Message On-Hold system with state-of-the-art digital playback hardware, you're plugging your client-owners into the freshest and most engaging veterinary health and behavior topics and information - simply and reliably.

100% DIGITAL

We use 100% digital technology for storing and playing messages to ensure reliable, continuous playback.

Easily download your PawsTime on-hold messages to the removable USB Flash Drive supplied with your unit. There is no need for special software. We email you an MP3 audio file of your messages. Save the file to your computer's hard drive and then simply "drag and drop" onto the USB Flash Drive.

SIMPLE TO LOAD & PLAY

After you move the MP3 file onto your USB Flash Drive, just plug it into the USB port on the playback unit. Your on-hold messages will load automatically to the 11 MB capacity internal flash memory chip on-board and then play continuously - 24/7, every day, year in and year out.

DURABLE

The durable aluminum enclosure will withstand rugged room conditions and minimize possible radio frequency and electromagnetic interference.

Clear, crisp, high quality audio every time you place a client on-hold.

RELIABLE

Reliably download files to any computer. MP3 and Flash technologies are completely PC and Mac compatible. Also, our playback unit features Power Reboot, providing a constant power source and solid state memory that will reboot the audio playback automatically after a power outage.

3-YEAR LIMITED WARRANTY

For peace of mind, our digital playback unit includes a 3-year limited parts and labor warranty.
